## **Dear Recruitment Team:**

I am submitting this letter with my application to express my interest in the internship opportunity you have available as a Security Engineering Intern in your team. I am very interested to work at your company and further add on my contributions.

I am currently pursuing my Master of Engineering at the University of Maryland, College Park majoring in cybersecurity. I am actively involved with the cybersecurity club here at UMCP and have gained a lot of knowledge by attending their sessions. I also have experience with Splunk, Metasploit, Burp suite and Nessus which I believe will be very essential to this internship.

I am very passionate about this field and have chosen courses which will help me build my career as a penetration tester. Some of the courses I have studied are -

1. Security tools for information security (ENPM685)
2. Hacking in C and Unix binaries (ENPM691)
3. Network Security (ENPM693)
4. Cloud security (FALL 2020)
5. Digital forensics and incidence response (FALL 2020)

As of now, I am currently preparing for security+ certification and participating in capture the flag challenges. I am also working on Web app penetration testing using Damn Vulnerable Web Apps (DVWA).

In addition to my academics. I also have experience working with large groups of people (Next Tech Lab had more than 100 students) and can easily adapt to avoid any miscommunication. I am very excited to work with you guys and hope I am up to the standards set up by the team. Thank you for your consideration.

**Sincerely,**

**Arpit Joshi**
